

Computer Science Networking

Program Description

If you're thinking of getting certified to work in Information Technology (IT), there's virtually no better place to prepare than at ACC where we enhance your learning with the Microsoft IT Academy Program. The Computer Science Networking Degree program prepares students for careers in many areas of LAN/WAN administration and design. The 63 credit A.A.S. program is designed to include the Microsoft Certified Systems Administrator (MCSA) and/or Microsoft Certified Systems Engineer (MCSE) sequence. Program graduates will be better prepared for both of these industry leading certification examinations as well as the more basic CompTIA Network+ and Security+ vendor neutral, certifications.

Career Opportunities

ACC is a valued member of the Microsoft IT Academy program and thus holds a leveraged position for success in a variety of career opportunities (e.g. installing, managing and maintaining Microsoft servers and networks worldwide). Currently in the U.S., the demand for skilled Information Technology (IT) workers has never been greater. According to the Texas Workforce Commission (TWC) Texas will need up to 57,000 new Systems Analysts, Database Administrators, and Computer Support Specialist within the next seven to ten years. The average starting salary for a Microsoft Certified Professional (MCP – someone who has passed at least one of Microsoft's Certification exams) is \$70,900 according to Microsoft Certified Professional magazine.
